NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

(1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                           Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Mashington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Data from AC079810 and AC073128 was used to finish this clone, AC009974. Polymorphisms have been identified between AC073128 and AC009974. A single plasmid region exists beteen 38812-38903. Am unresolved tandem in the HERV SVA exists between 184390-185163. PCR suggests that approximately 1700 bps are missing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The clone sequenced to the left is RP11-1077K22; the clone sequenced to the right is RP11-64705. Actual start of this clone is at base position 1 of RP11-459119; actual end is at base position 206854 of RP11-459119.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (NID:98364652) tz39c01.y1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to EST A1670836 (NID:94850567) wa04910.x1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note="match to EST BE047599 (NID:g8364652) tz39c01.yl"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            'note="match to EST A1670836 (NID:94850567) wa04910.x1"

                                                                                                                                                                                                                                              This sequence represents the full length cDNA encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting a the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon a subject to the variation of a G for a C at nucleotide 13 or resulting in the amino acid substitution of a T for a C at nucleotide 50; as useful in a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. CAMP)-activated kinase (AMPK) substituting the properties of the practical states of the practical practical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 ACAAGGCAGAAGTCGGTGGAGGAAGGGGAGCCACCAGGTCAGGGGGAAGGTCCCCGGTCC 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            heterofilimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Looft C, Kalm E, Milan D, Robic A, Rogel-Gaillard C; Gellin J, Le Roy P, Chardon P;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a cDNA encoding human adenosine monophosphate

                                                    ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (AMP) activated kinase (AMP) gamma subunit muscle-specific isoform, complete PRKAG3. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular disease, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.

Transgenic animal and host cell transformed with PRKAG3 or a heterotriment AMPK consisting of PKKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain
                                                                                                                                                                                              PRKAG3; diabetes; obesity; myopathy; cardiovascular disease; anorectic; genetic testing; carbohydrate metabolism disorder; skeletal muscle; cystathione beta synthase; CBS; cardiant; gene therapy; ss.
                                                                                Human AMPK gamma subunit muscle-specific isoform, complete PRKAG3 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Robic A, Rogel-Gaillard C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a cDNA encoding human adenosine monophosphate

New variants of human AMP-activated protein kinase gamma3 subunit associated with a metabolic disease e.g. diabetes or obesity and method for determining a risk estimate of diseases in subject by detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a substitution of a substitution of a grow at a nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation in intron 6.

Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism

such as myopathy and cardiovascular diseases, to modulate AMPK
activity, and for restoring a normal AMPK function. PRKAG3 sequence
and its functionally altered mutants are useful for the diagnostic
evaluation, genetic testing and prognosis of a metabolic disorder,
preferably a carbohydrate metabolism disorder. Primers that can detect
a genetic polymorphic marker linked to a sequence encoding PRKAG3, are
useful for detecting a dysfunction of carbohydrate metabolism resulting
from the expression of a functionally altered allele of PRKAG3.
Transgenic animal and host cell transformed with PRKAG3 or a
heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for
screening compounds able to modulate AMPK activity. Nucleic acid
encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or
in a sequence encoding the first cystathione beta synthase (CBS) domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                (AMP) activated Kinase (AMPK) gamma subunit muscle-specific isoform, complete PRRAG3. Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRRAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as clabeles, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRRAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRRAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRRAG3 or a grand and host cell transformed with PRRAG3 or a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig wild-type PRKAG3 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for screening animals to determine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant DNA (PRKAG3-199).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /*tag= a

The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRRAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRRAG3 polymorphic variant DNA (PRRAG3-30).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /product= "Pig PRKAG3 polymorphic variant (PRKAG3-199)"

The present sequence is pig adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3 splice variant DNA. Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 gene is located in the RN locus of chromosome 15. Therapeutic for treating an altered regulation of carbohydrate metabolism alsorders such as ciabetes, obesity, and disorders associated with muscle metabolism cardivity, and for restoring a normal AMPK function. PRKAG3 sequence activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a PrkaG3 demain as sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant DNA (PRKAG3-200).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pig, gamma subunit; adenosine monophosphate-activated kinase; AMPK; PRKAG3; diabetes; obesity; myopathy; cardiovascular disease; anorectic; genetic testing; carbohydrate metabolism disorder; skeletal muscle;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Screening animals to determine those likely to produce larger litters and improved meat quality traits involves assaying for the presence of polymorphisms in the AMP activated protein kinase regulatory gamma

Screening animals to determine those likely to produce larger litters and improved meat quality traits involves assaying for the presence of polymorphisms in the AMP activated protein kinase regulatory gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase requiatory gamma subunit (PRRAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRRAG3 gene 5' flanking region including

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant DNA (PRKAG3-22).

                   Screening animals to determine those likely to produce larger litters and improved meat quality traits involves assaying for the presence of polymorphisms in the AMP activated protein kinase regulatory gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRRAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRRAG3 gene 5' flanking region including

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The coordinate production of (II) the configuration of (II) and gene are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for the correct normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amino acid sequences. AAS4197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1114 GGCAGGGCCGGTGGGGAAACTGTGGCCCGGAGGTCAGGGGTCCTGTCCACAGTC 1168

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. . 11 (2), 281-289 (2001) Kondo, S., Shinagawa, A., Saito, T., Kiyosawa, H., Yamanaka, I., Alzawa, K., Fukuda, S., Hara, A., Itoh, M., Kawai, J., Shibata, K. and
cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 185.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGARTICTGAGTIAATTAATTAATTCCCCCCCCCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Arakawa,T., Carninci,P., Fukuda,S., Furuno,M., Hanagaki,T., Hara,A., Hiramcio,K., Hori,F., Ishii,Y., Ito,M., Kawai,J., Kondo,H., Kouda,M., Koya,S., Matsuyama,T., Miyazaki,A., Nomura,K., Ohno,M., Okazaki,Y., Okido,T., Saito,R., Sakai,C., Sakai,K., Sano,H., Sasaki,D., Sahbata,K., Shinagawa,A., Shiraki,T., Soqabe,Y., Suzuki,H., Tagami,M., Tagawa,A., Takhashi,F., Takeda,Y., Tanaka,T., Toya,T., Muramatsu,M. and Hayashizaki,Y.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
